

Is your company secure?

Are you protected from phishing and ransomware, the two most common threat scenarios? Chances are, you may need some help.

Cyberthreats are a material risk to your business.

Australian Notifiable Data Breaches Scheme

Last year the Office of the Australian Information Commissioner introduced the Notifiable Data Breaches scheme (NDB scheme). The NDB scheme introduced new obligations for Australian Government agencies and private sector organisations (entities) that have existing information security obligations under the Privacy Act 1988 (Cth) (the Privacy Act).

For a little over a year, it has been a legal requirement for entities to carry out an assessment whenever organisations suspect that there may have been loss of, unauthorised access to, or unauthorised disclosure of personal information that they hold. If serious harm is likely to result, they must notify affected individuals so they can take action to address the possible consequences. They must also notify the Office of the Australian Information Commissioner (OAIC).

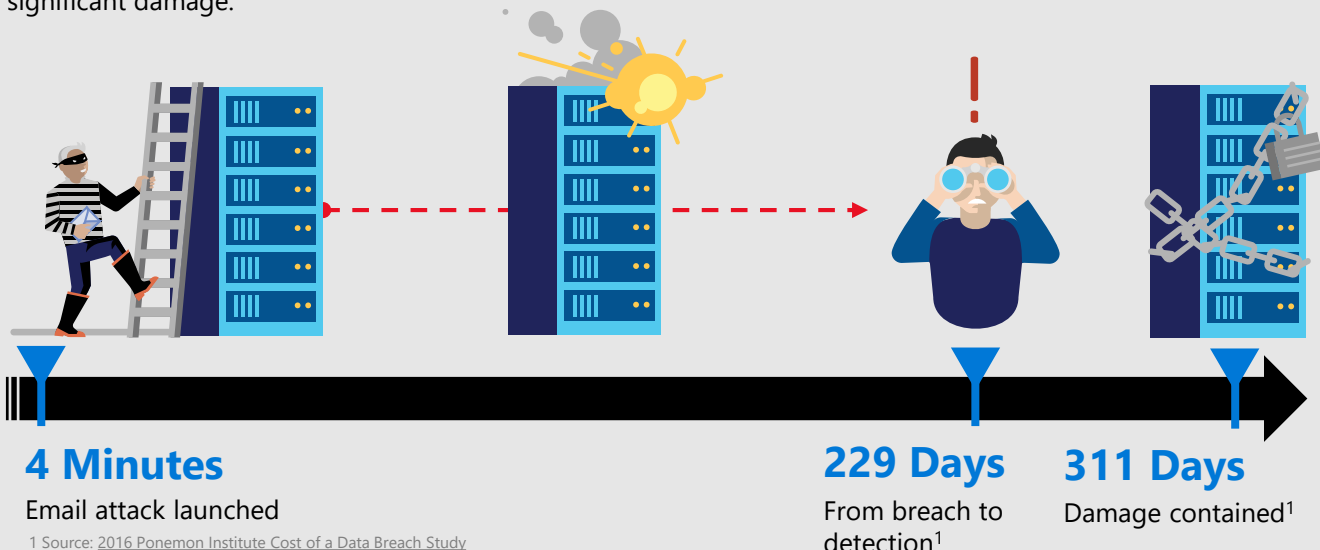

On the 13th May 2019, the OAIC released its 12 month report which highlighted:

Did you know?

It can take over 7 months to discover a breach and another 80+ days to contain it. Plenty of time to inflict significant damage.

Know your strengths...and weaknesses

- Do you know who is accessing your data?
- Can you grant access to your data based on risk in real time?
- Can you protect your data on devices, in the cloud, and in transit?
- Can you quickly find and react to a breach?

Get secure using Microsoft 365
